

# Environment & Sustainability Policy

Taylor are the UK market leaders in providing waste and recycling containment systems distributing products and services worldwide. We believe that if waste management and recycling are to be successful, we need to create products and solutions that appeal to ordinary people. We understand that waste management systems and processes are a fundamental part of our business and therefore we should be seen as a leader in principles and processes for managing waste and developing environmental improvements.

Our guiding principles are therefore:

- To maintain a sustainable environment throughout all aspects of our business.
- By reinforcing consultation with our customers, partners and employees we aim to create a common goal of progress, environmental protection, and in doing so contributing to conserve natural resources to combat climate change.
- Work with our clients and partners to ensure that products and services are only acceptable where they present no adverse environmental impact, unless an overriding need can be shown to outweigh the environmental and ecological interest and there are no alternate solutions.
- Select and use energy, water and other natural resources efficiently, effectively and conscientiously during all of our operations.
- Minimise light, noise, vibration, air, land and water pollution levels so as to avoid damage to existing natural systems and habitats. Where waste is generated we will aim to minimize, recycle or securely dispose of such waste.
- Ensure that all organisations, contractors and suppliers who provide services through contractual arrangements operate in a manner that is socially responsible, and that such parties are aware of Taylors core values.
- We will promote innovation, research and development, environmental, economic and social solutions that will driver our business model forward for the future.
- We will work to improve and minimise the environmental impacts of our business activities, operations and products. We will accomplish this by continually improving our environmental management systems.
- We will ensure compliance with all relevant legislation, contractual or other obligations, and anticipating them whenever possible. We will ensure that all permits, licenses and regulations are maintained and will work closely with all interested parties to demonstrate our compliance.
- We will deploy and maintain an integrated management system focused on the principles of ISO 14001 that will provide for setting and reviewing objectives with the aim of improving our service and controlling and reducing the impact of our activities
- We will plan for and take effective actions during or following emergencies in order to sustain business continuity, protect our business, sustain an ongoing supply of products and services where physically possible and minimise the impact on the environment.
